# To-Do List pp API Planning
## Objective
Identify and plan the necessary APIs for a To-Do List app lication using
Express.js
## 1. Add Task
-**Method:**POST
-**Endpoint:** /api/tasks
_____

## 2. Get ALL Tasks
-**Method:** GET
_**ENDpoint:** /api/tasks
### Logic
-Fetch all tasks
-Return the list of all tasks

______

## 3. Get Single Task
-**Method:* GET
-**Endpoint:* /api/tasks/:id
### Logic
-Get the task ID from the URL.
-Find the task with that ID.
-Return the task details.

------

## 4. Update Task
-**Method:** PUT
-**Endpoint:** /api/tasks/:id
### Logic
-Get the task Id from the URL.
-Update the task details.
-Return the updated task.

------

### 5. Delete Task
-**Method:** DELETE
```

````
--**Endpoint:** /api/tasks/:id
### Logic
-Get the task Id from the URL.
-FInd the task
-Delete the task
-Return a success message.

### Request Body
```json
{
    "tittle": "Completw API Task",
    "description": "Plan APIs for TO-Do List App"
}

# To-Do List App API Planning

## About

This project focuses on identifying and planning the APIs required for a
To-Do List application using Express.js.

## Objective

The objective is to plan the necessary REST APIs for performing different
operations on tasks.

## Planned Operations

- Add a new task
- Get all tasks
- Get a single task
- Update a task
- Delete a task

## API Endpoints

| Operation | Method | Endpoint |
|---|---|---|
| Add Task | POST | `/api/tasks` |
| Get All Tasks | GET | `/api/tasks` |
| Get Single Task | GET | `/api/tasks/:id` |
| Update Task | PUT | `/api/tasks/:id` |
| Delete Task | DELETE | `/api/tasks/:id` |

## Note

This task focuses only on API planning and RESTful API design.
The actual Express.js implementation will be done in subsequent classes.
```
